TRUEMARK

BIOLABS

Brand Guidelines

Version 1.0 · September 2026 · Prepared for web & marketing partners

The brand at a glance

TrueMark BioLabs supplies research-use-only peptides as lyophilized powder in sealed vials. The brand promise is simple: every vial is third-party tested, every lot is traceable, and every certificate of analysis is one scan away.

NAME

Always **TrueMark BioLabs** — capital T, M, B and L — in running text, legal lines and certificates. The wordmark itself is set in caps (TRUEMARK / BIOLABS). The domain is **truemarkbiolabs.com**. Never "Truemark", "True Mark", "Biolabs" or "BIOLABS" in prose.

PERSONALITY

Precise, transparent and modern — a lab-grade product with a consumer-grade finish. The look is clean white space, sharp geometric type and one bold gradient that runs red → purple → blue, with a colour-coded product system underneath it. It should feel confident and technical, never clinical-cold, never "supplement bro".

VOICE

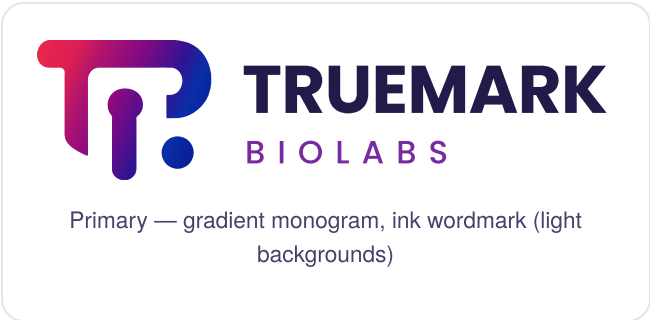

- Plain, specific, verifiable. Lead with facts a researcher can check: lot number, purity, test lab, certificate.
- Short sentences. Sentence case for UI and headings ("Verify your lot"), all caps only for the wordmark, pills and label bands.
- Every product is described in research framing: *research peptide*, *lyophilized powder*, *for research use only*. No dosing, no reconstitution instructions, no health, body or performance claims — ever, including in ads and social posts.
- Compliance line to carry on every page footer, product page and printed piece: **"For research use only. Not for human consumption."**

SIGNATURE ELEMENTS

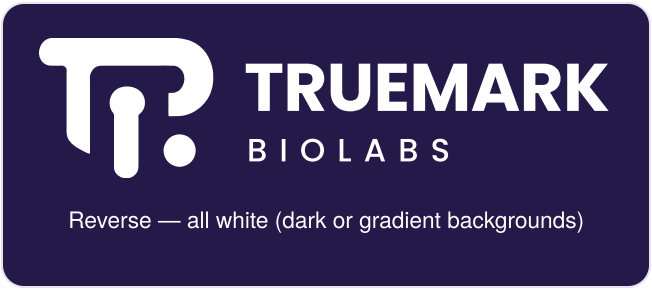

- The **TR monogram** in the brand gradient.
- The **gradient band** (red → blue) used for headers, CTAs, bands and strips.
- **Category colour**: each product family has its own hue, used for labels, badges, caps and product-page accents.
- **Rounded pills** with a 2 px white outline on coloured bands ("≥99% PURITY", "THIRD-PARTY TESTED").
- Soft **wave motif** in the gradient at 10–15% opacity as a background texture.

Logo

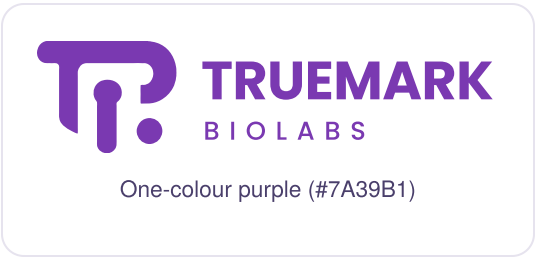

The monogram is a T whose bar flows into an R bowl, with a vial-pin shape at the centre and a dot at the lower right. It is supplied as true vector (SVG) — never redraw or trace it from a raster.

Primary — gradient monogram, ink wordmark (light backgrounds)

Reverse — all white (dark or gradient backgrounds)

One-colour purple (#7A39B1)

One-colour black — fax, engraving, single-ink print

Monogram alone — favicons, avatars, stickers, vial seals

CLEAR SPACE & MINIMUM SIZE

Keep clear space equal to the height of the monogram's dot on all sides. Minimum size: monogram 24 px / 6 mm tall; horizontal lockup 140 px / 35 mm wide; stacked lockup 90 px / 22 mm wide. Below that, use the monogram alone.

CATEGORY-COLOUR MONOGRAMS

On product labels the monogram is used flat in the product's category colour (files in `01_Logo/Monogram_Category_Colors`). This is the only approved recolouring.

DON'T

- **Don't** stretch, rotate, outline, add drop shadows or glows.
- **Don't** reverse the gradient direction (red stays at the top-left / T bar, blue at the R bowl and dot).
- **Don't** retype the wordmark in Poppins next to the monogram — use the lockup files (text is outlined, no font needed).
- **Don't** place the gradient version on busy photos or on the gradient background — switch to white.

Colour

BRAND GRADIENT

`linear-gradient(100deg, #E9284C 0%, #B3146B 28%, #7A2AA0 55%, #2F1492 80%, #0A2EA9 100%)`

Runs left→right on bands and buttons; on the monogram it runs from the T bar (red) to the R bowl and dot (blue). Logo stops, blue → red:

`#081D94` `#0A2EA9` `#2F1492` `#630C8A` `#8A0B7E` `#B3146B` `#DB1E54` `#E9284C`

CORE PALETTE

ROLE	HEX	USE
Brand purple	`#7A39B1`	Links, primary buttons (solid), icons, the default accent when no category applies
Ink	`#241A4A`	Headlines and body text on light backgrounds
Ink soft	`#4A3F6B`	Secondary text, bullets
Muted	`#7C7391`	Captions, legal, meta
Surface grey	`#F4F5F8`	Section backgrounds, cards, product image backdrop tint

CATEGORY SYSTEM

Each product family owns one hue. Use the brand hex for bands, badges, buttons and caps; use the ink shade for text of that family on white (all pass 8:1 contrast).

CATEGORY	HEX	RGB	CMYK ≈	TEXT INK	PRODUCTS
Purple	`#7A39B1`	122, 57, 177	31 / 68 / 0 / 31	`#471C6C`	Incretin & amylin peptides
Teal	`#058F93`	5, 143, 147	97 / 3 / 0 / 42	`#005658`	BPC-157 family
Pink	`#CC3358`	204, 51, 88	0 / 75 / 57 / 20	`#7C1830`	GHK-Cu & GLOW
Blue	`#0273D0`	2, 115, 208	99 / 45 / 0 / 18	`#00437A`	CJC/Ipamorelin & Tesamorelin
Gold	`#B97102`	185, 113, 2	0 / 39 / 99 / 27	`#6C4200`	NAD+ & MOTS-C
Green	`#4E762E`	78, 118, 46	34 / 0 / 61 / 54	`#2D4817`	Semax & Selank
Orange	`#AB531A`	171, 83, 26	0 / 51 / 85 / 33	`#682F0B`	Melanotan II
Slate	`#486377`	72, 99, 119	39 / 17 / 0 / 53	`#253A49`	BAC Water

Typography

Poppins Bold

POPPINS MEDIUM · TRACKED CAPS

Poppins Regular for UI text on coloured bands, buttons and pills. Google Fonts, SIL Open Font License.

TeX Gyre Heros Bold

TeX Gyre Heros Regular for body copy and product detail — a free Helvetica-class typeface (GUST licence, files included). On the web, **Helvetica Neue / Helvetica / Arial** are drop-in substitutes: `font-family: 'TeX Gyre Heros', 'Helvetica Neue', Helvetica, Arial, sans-serif;`

PAIRING RULES

- **Poppins** = brand voice: wordmark, headlines, pills, buttons, section labels, numbers that should feel designed (prices, "15% OFF").
- **Heros / Helvetica** = information: product names, descriptions, lot numbers, tables, legal text.
- Headlines in sentence case, Poppins 700, tight tracking (−0.5%). Small labels in Poppins 500/600 caps with +6–10% tracking.
- Body 16–18 px on the web, line-height 1.5, ink colour on white; never pure black.

SUGGESTED WEB SCALE

ELEMENT	FONT	SIZE / WEIGHT
Hero headline	Poppins	48–64 px · 700 · gradient text or white on gradient
Section heading	Poppins	32 px · 700 · ink
Card / product title	Poppins	20 px · 600 · ink
Body	Heros / Helvetica	17 px · 400 · ink soft
Badge / pill / eyebrow	Poppins	12–13 px · 600 · caps, +8% tracking
Legal / compliance line	Heros / Helvetica	12–13 px · 400 · muted

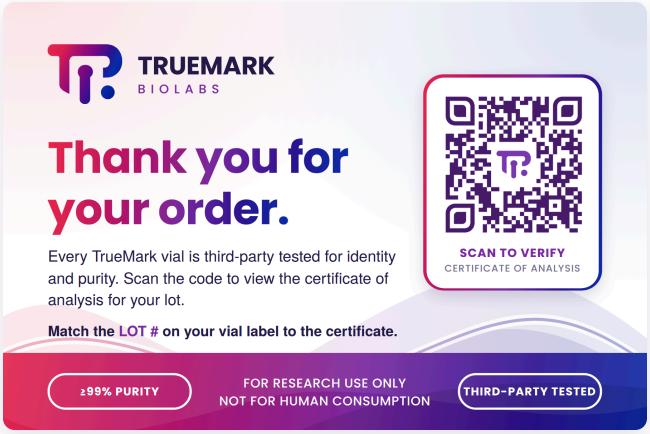

Labels & packaging

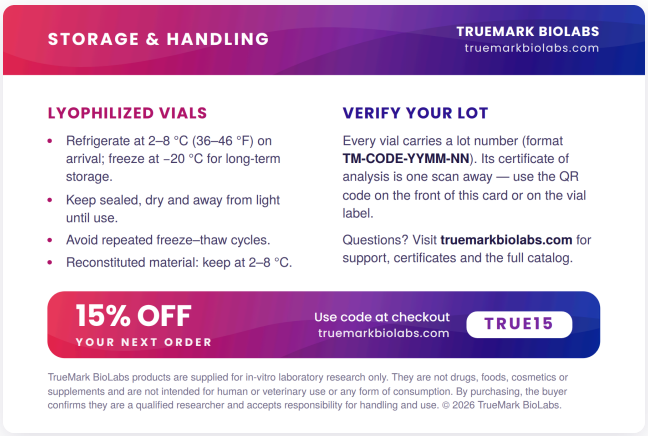

Vial label, 1.75 × 0.75 in. Left: monogram + wordmark in the category colour, LOT block. Centre: the COA QR in a white rounded frame. Right: product name, dose pill, description. Bottom: category band with purity pill, research-use warning and third-party-tested pill. Category colour = band, pill, logo and QR; text uses that family's ink shade.

RULES THAT MUST NOT CHANGE

- **The QR code** links to the certificate page and is the original artwork recoloured per category. Never regenerate, redraw or resize it below 10 mm.
- **Lot numbers** follow `TM-[CODE+DOSE]-[YYMM]-[BATCH]`, e.g. `TM-RET10-2609-01`. They appear on labels and certificates; the website should let a customer look one up.
- Product names as printed: "CJC (NO DAC) / IPAMORELIN", "BPC-157 / TB-500" (spaced slash), "NAD+" is a *research compound*, BAC Water reads "0.9% BENZYL ALCOHOL".

The 4 × 6 insert card ships in every order: thank-you + COA QR on the front; storage, lot verification and a 15%-off code on the back. Its layout — gradient bands, outlined pills, wave motif, ink text — is the template for web sections and email headers.

Product imagery

Twenty product images (2000 × 2000 px) in one consistent style: clear glass vial, silver crimp seal, white flip-off cap, label facing the camera, loose lyophilized powder, soft light-grey studio backdrop. Use them on product cards, category pages and ads; do not add colour casts, heavy shadows or mirror them (the label text would reverse).

IF YOU SHOOT OR GENERATE NEW IMAGERY

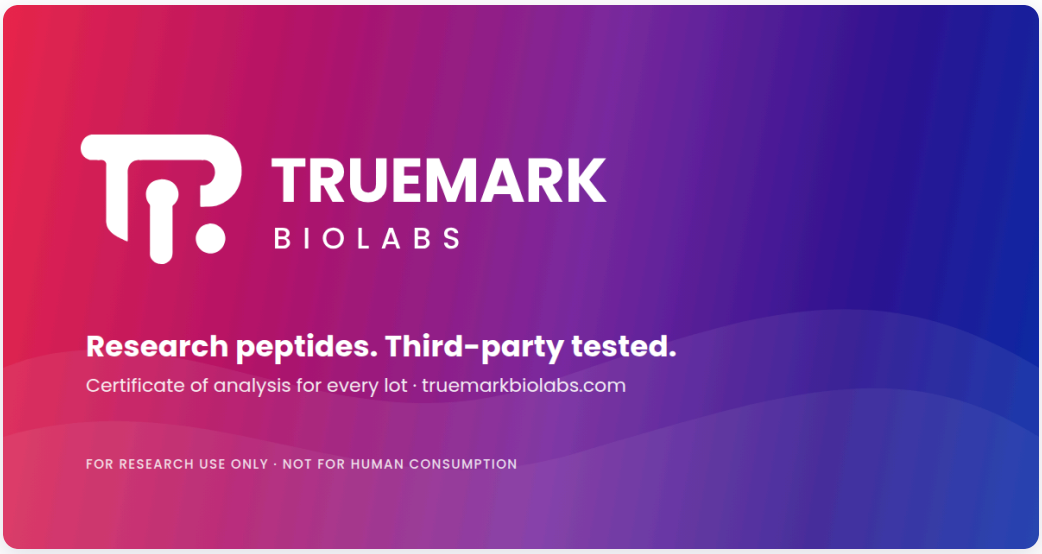

- White cap and silver seal on every vial — the category colour lives on the label, not the cap.
- Camera slightly above eye level, label centred and legible, neutral grey-white background, soft shadow to the right.
- Group shots: arrange by category colour (purple family together, teal family together…).

QR CODES

Eight colour versions of one code, all pointing to the certificate-of-analysis page. Use the purple version by default on the website and marketing; use the family colour when the code sits on that family's product page.

Web application

Open Graph image (1200 × 630) and hero banner are in `08_Web_Assets`. The pattern for pages: white or surface-grey sections with ink text, gradient hero and CTA bands with white type, category-coloured badges and buttons on product pages, the wave motif at low opacity for texture.

COMPONENTS

- **Primary button:** gradient background, white Poppins 600 text, fully rounded (pill), no border. Hover: lift + slight brighten. Secondary: white pill with 2 px purple outline.
- **Category badge:** pill, category hex background, white Poppins 600 caps 12 px, +8% tracking (e.g. "INCRETIN" in purple, "REPAIR" in teal).
- **Trust row:** three outlined pills on a gradient band — "≥99% PURITY", "THIRD-PARTY TESTED", "COA FOR EVERY LOT" — mirrors the label band.
- **Lot lookup:** an input styled like the LOT block (small "LOT:" eyebrow, large bold number) that resolves to the certificate.
- **Footer compliance line** on every page: "For research use only. Not for human consumption."

TOKENS

Drop `02_Colors/truemark_tokens.css` into the theme; every colour and font stack above is a CSS custom property (`--tm-purple`, `--tm-gradient`, `--tm-cat-teal`, `--tm-font-brand` …). Favicons and `site.webmanifest` are in `01_Logo/Favicons_App_Icons`. Product data (names, doses, codes, category colours, file paths) is in `09_Product_Catalog_Data` as CSV and JSON for seeding the store.

Kit contents

`01_Logo`	Monogram SVG/PNG (gradient, black, white, purple, 8 category colours), horizontal & stacked lockups with outlined text, favicons + webmanifest
`02_Colors`	truemark_colors.json, truemark_tokens.css
`03_Typography`	Poppins TTF (OFL), TeX Gyre Heros OTF (GUST), licences, usage notes
`04_Vial_Labels`	20 labels as PNG (3600 px) and SVG, one-per-page print PDF, letter sheet, 40-up CJC 5/5 sheet, contact sheet
`05_Product_Images`	20 product renders 2000 × 2000
`06_QR_Codes`	8 colour versions of the COA QR + preview
`07_Insert_Card`	4 × 6 card print PDFs (combined, front, back) + previews
`08_Web_Assets`	OG image, hero, avatars, social banner, wave background (PNG + SVG)
`09_Product_Catalog_Data`	Product list with doses, codes, categories, colours, first-batch lots and file paths (CSV + JSON)
`10_Source_Files`	Python build scripts + original artwork, so any asset can be regenerated

HAND-OFF NOTES

- SVG files are the masters; PNGs are conveniences. WordPress blocks SVG uploads unless a plugin such as Safe SVG is installed — otherwise use the PNGs.
- The wordmark text in the lockups is outlined (converted to paths), so no font is required to display it.
- Fonts are free for commercial use and web embedding (licences included). Poppins can be loaded from Google Fonts.
- Product data in `09_Product_Catalog_Data` matches the label artwork exactly — names, doses and category colours should be taken from there, not retyped.
- Questions on brand usage: Mason Linder, Mason@truemarkbiolabs.com.
