01 / SYSTEM WALKTHROUGH

Backend & system connections

Confirm the backend works from start to finish

Walk through customers, account creation, logins, tracking, and the connection between the backend and the customer-facing website. Show how changes reach the front end. Review our latest backend updates, what is already working, and what remains unfinished or disconnected.

Where everything is saved

Explain where everything is saved, including customer records, account information, orders, tracking, site content, and agent information.

How GitHub, Supabase, and the TrueMark brain connect

Show me the complete system and data flow: what runs on the front end, what runs on the backend, what Supabase stores or controls, what GitHub contains, and how a change moves from the code to the live site. Explain how the TrueMark brain connects to the backend, database, and agents.

Where I should make future changes

Show me where I should make future changes, how GitHub and Supabase should be updated together, and which changes can affect customer data, logins, orders, tracking, website content, or the AI brain.

A safe process for adding features

Give me a safe process for adding features: create a separate GitHub branch, preview and test the change, review any Supabase database or permission changes, approve the update, deploy it, and verify the live result.

Checks and balances

Set up checks and balances so I do not accidentally break the live site or data. Cover backups, database migrations, access permissions, automated checks, a staging or preview environment, deployment approval, monitoring, and rollback.

Written system handoff

Leave me with a simple written map of the system, the accounts and access I need, the changes I can safely make myself, and the changes Riley should review before they go live.

02 / CONNECTIVITY

AI agents & integrations

Customer agent

Connect the customer agent to the TrueMark brain so it can learn and improve over time, use its capabilities to help customers thoughtfully, and avoid repeating the same canned answers. Agree on how learning and memory will work.

Partner agent

Make the partner agent useful and capable of taking action, beyond answering from fixed chatbot data. Review the partner capabilities we already discussed and confirm they are connected.

My personal agent and working demonstrations

My personal agent already has a running version. Review its existing setup and connections. Demonstrate a complete task for the customer and partner agents and confirm their data access and permissions.

Software, analytics, and email flows

Identify every software tool and account needed for backend connectivity. Connect Google Analytics and confirm that tracking works. Review email flows and the email-flow agent we discussed. Identify the software, triggers, and backend connections needed.

Website URL and payment processor

Confirm the website URL we need so we can move forward with a payment processor. Identify anything still needed before we can apply or connect it.

Questions to settle with Riley

Which parts of the backend and integrations can we demonstrate working now, and which still need to be built or connected? How will the customer agent learn through the TrueMark brain and give more thoughtful help? Which previously discussed partner actions will it perform, and how does the existing personal agent connect? What website URL and remaining setup are needed for payment processing? What exact settings should we use for shipping statuses, large-order reviews, discounts, rewards, and profit calculations?

03 / BACKEND WORKFLOWS

Operations & business tools

ShipStation and the shipping desk

Walk through the shipping workflow in depth and agree on the exact status names and triggers.

01 Packed

Print a label and mark the order “Packed.”

02 Dropping off

Use “Dropping off” for the stage before the carrier confirms shipment, instead of marking it “Shipped” too early.

03 Shipped

Automatically mark the order “Shipped” once UPS or FedEx scans the package and tracking confirms the handoff.

Mobile shipping desk

Fix the mobile shipping desk view where content is cut off below the fulfillment queue.

Command Center

Orders and overview: remove the “Placed” state because the intended flow treats placed orders as paid. Confirm the payment behavior before changing the status logic. Risk review: set up automatic review triggers for large orders. Agree on the quantity thresholds. Lots and certificates: refine lot management and certificate tracking views. Products and inventory: improve inventory synchronization and management. Combine inboxes and allow messages to customer accounts directly from the dashboard.

Research Blog

Rename “Journal” to “Research Blog.” Make it possible to publish new posts so they appear automatically and manually edit existing copy.

Profit planner

Add testing costs, affiliate costs, and discount percentage. Agree on how each affects the profit calculation.

04 / STOREFRONT

Homepage & collection display

Brand placement

“Verified” was changed to “TRUEMARK.” Position “TRUEMARK” slightly behind the vials, as in the original design, rather than above them.

Hero copy

Retain “RESEARCH PEPTIDES” beneath “True precision.” Change remaining “Research Compounds” wording to “Research Peptides.”

Shop Peptides button

“View catalog” was changed to “Shop Peptides.” Make the “Shop Peptides” button reappear lower down after the “Organized by compound class” section.

Promotions

Clean up the placement of the free-shipping offer and “10% off your first order.” Use $200 for free shipping. The original screenshot still shows the older $150 offer.

Original homepage reference

Look Closer and compound classes

Look Closer: skip step 01 and go straight to step 02 so the feature shows its function instead of only zooming in on the vial. Compound classes: make the peptides clickable so they lead to the relevant categories. Add continuous carousel scrolling in class order and automatic sliding.

Desktop and mobile animation

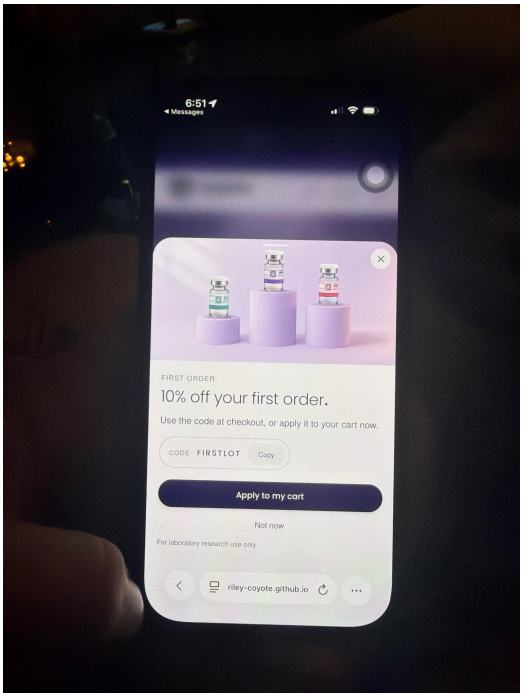

Fix the desktop compound-class animation. It moves up and down and currently needs an exact scroll position to display and work properly. Add animation on mobile when scrolling down from the homepage. Review the spotlight collection carousel: I like it on desktop, but it is not intuitive on mobile.

05 / PHOTO REFERENCES

Promotion timing & About page

First-order promotion

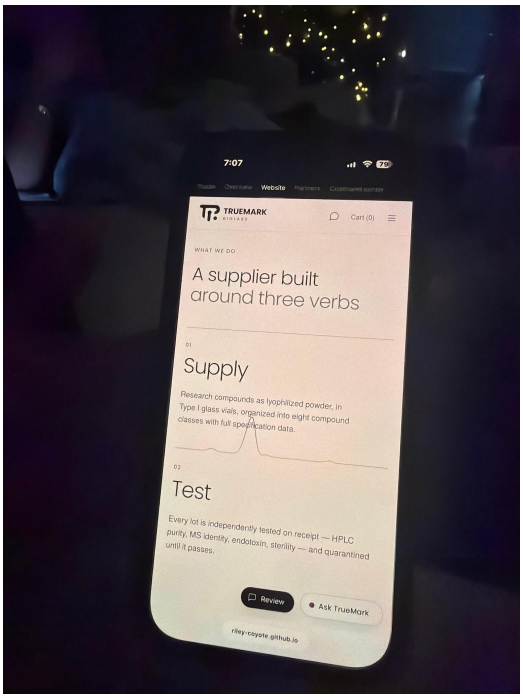

Show this popup only after the visitor has scrolled down a little. Agree on the point at which it should appear.

First-order offer popup

Mobile About page

Resolve the layout and function bugs on the About page. The purity animation overlaps the text on mobile.

Purity animation overlaps the copy

06 / SHOPPING EXPERIENCE

Accounts, products & verification

Research account application

Discuss the research account application flow in depth and rethink how the overall process should work.

First-visit guidelines and verification

Review the first-visit research guidelines and verification flow, including how the guidelines open and how the CAPTCHA works. Mimic the first-visit researcher verification screen shown on the following page.

Application wording

Change the account application action from “Apply” to “Create.”

Vial options and discounts

Show 1-vial, discounted 2-vial, and discounted 3-vial options. Confirm the discount amounts. Mimic the quantity-pricing layout in the reference on page 10.

Purity results for stacks

For stacks, show all relevant purity results on the product page and the Verify page. Remove the limitation that prevents all purity percentages from reaching the main site.

GLP-1 names

Change the GLP-1 names. Confirm the exact replacement names before making the edits.

Verify page animation

Revisit the Verify page animation. I preferred the original animation, but want it to fit the current visual style.

Product-image positioning bug

On the products page, clicking products appears to open the product image at the middle position for all products except NAD and BPC157. Investigate this inconsistent behavior and compare those two exceptions with the other products.

Preserve the animation; check optimization

I love the existing animation. It is slightly glitchy, so check performance and optimization to make it run smoothly. Preserve its visual design and motion; do not replace or redesign it.

07 / NEW WEBSITE REFERENCE

First-visit verification & disclaimer

Researcher verification on first visit

Mimic the first image's researcher verification screen when someone first enters the site, using TrueMark branding and styling.

Confirmation flow

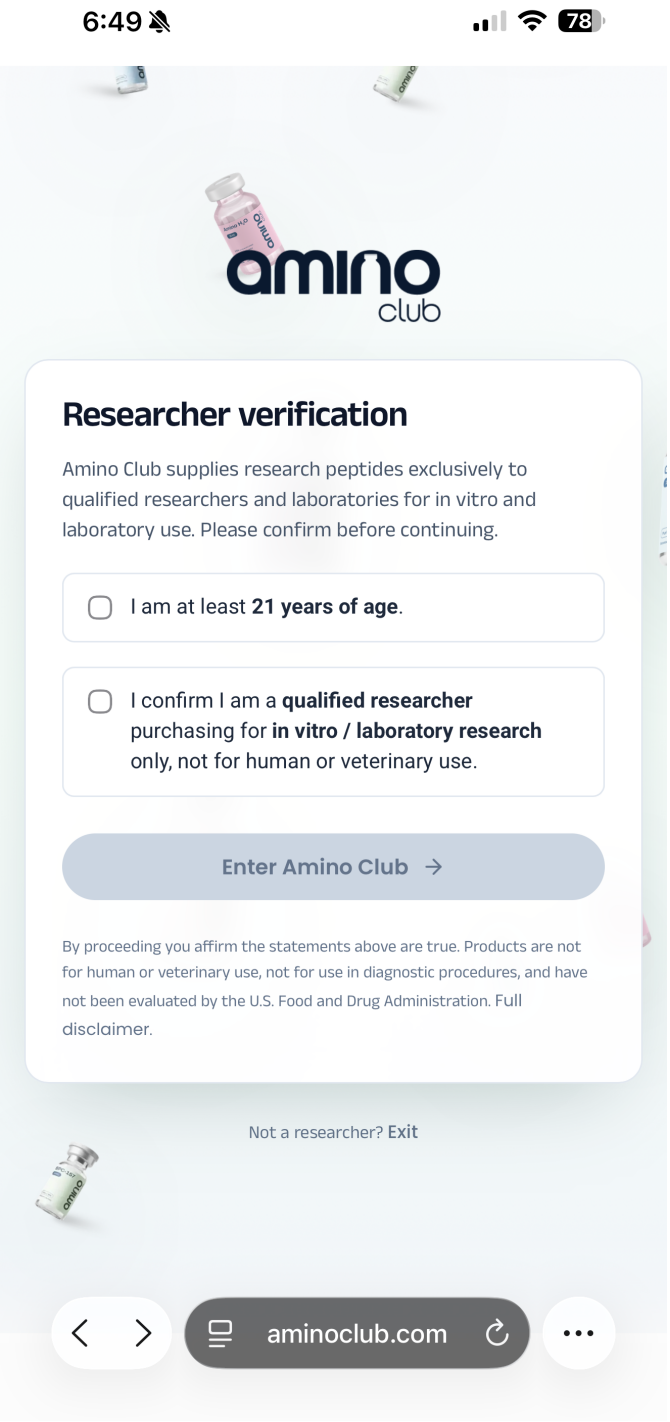

Include separate confirmations for age 21 or older and qualified-researcher status for in vitro / laboratory research only. Match the reference's entry button, disclaimer link, and exit option. Enable entry after both confirmations.

Add a disclaimer page

Add a dedicated TrueMark disclaimer page using the supplied Amino Club page as the reference for the content and structure to copy and adapt. Connect it to the first-visit verification screen.

Amino Club disclaimer reference

aminoclub.com/disclaimer/disclaimer

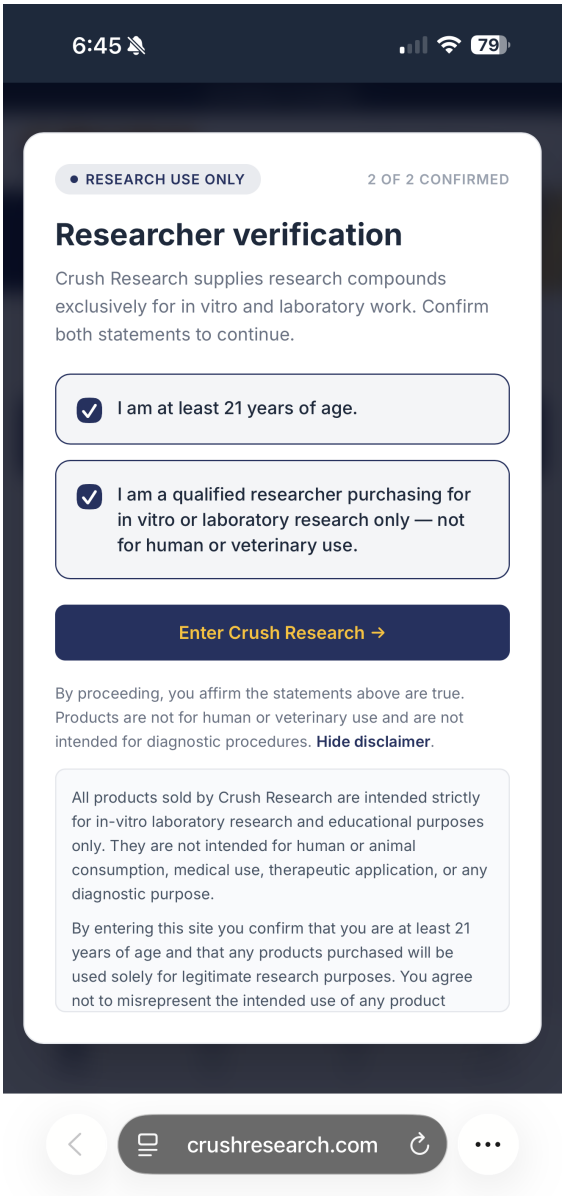

First image: first-visit researcher verification

08 / ADDITIONAL VISUAL REFERENCES

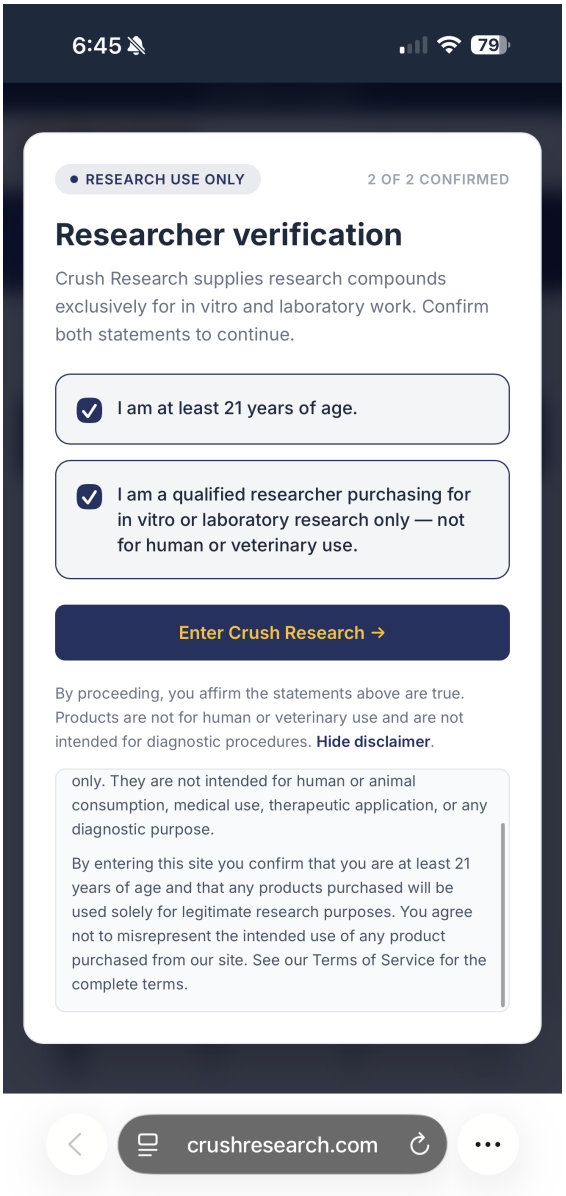

Research-use entry screen

Crush Research examples

Use these examples alongside the Amino Club reference: a “Research use only” label, two explicit confirmations, a confirmation count, an entry button, and an expandable disclaimer. Keep the TrueMark visual style.

IMG_1771: expanded disclaimer, beginning

IMG_1772: expanded disclaimer, continuation

09 / IMPLEMENTATION DETAILS

First-visit copy & behavior

Research-use disclaimer copy

Use the supplied Crush Research wording below with the brand changed to TrueMark. Keep the full text available from the entry screen and on the dedicated disclaimer page.

TrueMark copy

All products sold by TrueMark are intended strictly for in-vitro laboratory research and educational purposes only. They are not intended for human or animal consumption, medical use, therapeutic application, or any diagnostic purpose.

By entering this site you confirm that you are at least 21 years of age and that any products purchased will be used solely for legitimate research purposes. You agree not to misrepresent the intended use of any product purchased from our site. See our Terms of Service for the complete terms.

Confirmation labels

“I am at least 21 years of age.” “I am a qualified researcher purchasing for in vitro or laboratory research only, not for human or veterinary use.”

Entry-screen behavior

Show this verification on first view. Start with both confirmations unchecked and the entry button disabled. Update the confirmation count as each box is checked. Enable “Enter TrueMark” only when both are selected. Include a clear exit option for visitors who do not qualify.

Disclaimer and Terms links

Include a show/hide disclaimer control with readable full copy, as in the screenshots. Keep a link to the dedicated disclaimer page and make “Terms of Service” a working link. Ensure the entry screen and expanded text work on mobile and desktop.

Details to settle with Riley

Confirm how long the site remembers the visitor’s confirmation and when it should appear again. Fit this entry screen into the existing research guidelines, CAPTCHA, and account-creation flow.

10 / NEW PRODUCT-PAGE REFERENCE

One-, two- & three-vial discounts

Mimic the quantity-pricing layout

Use the second image as the reference for clear, selectable one-vial, two-vial, and three-vial discount options on product pages.

One vial

Show the standard single-vial option and price.

Two vials

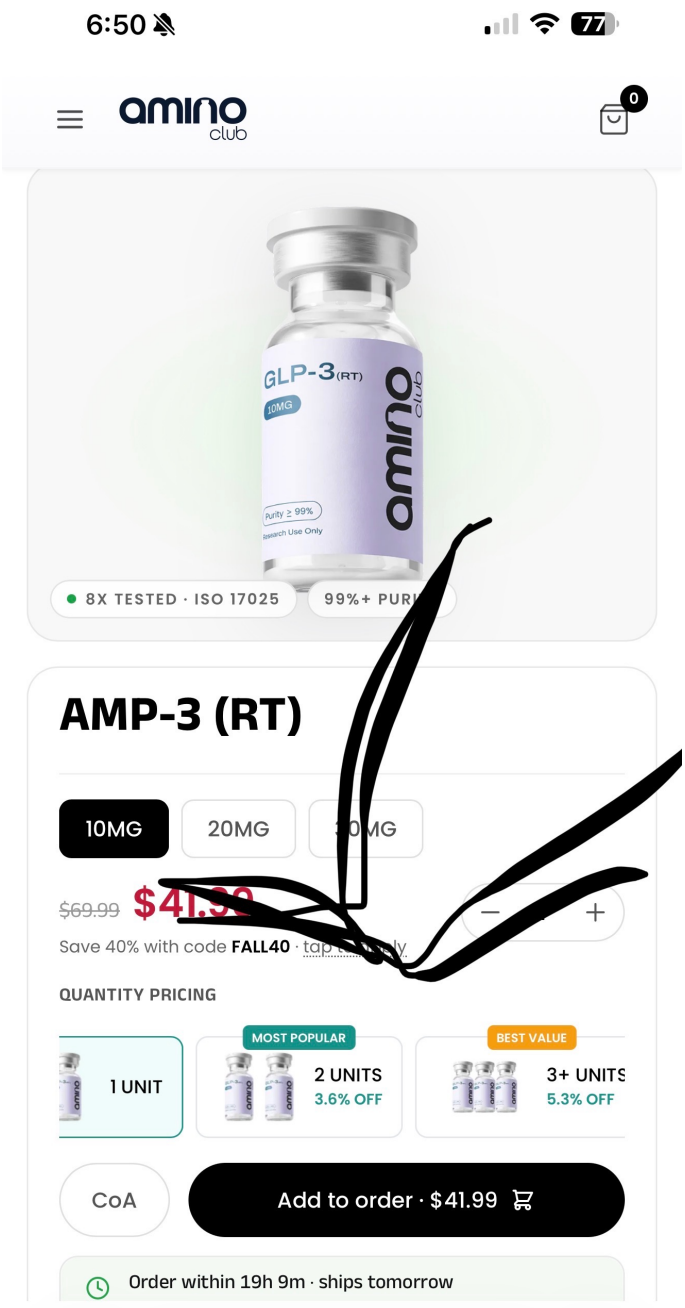

Show a discounted two-vial option with the savings visible. Mimic the reference's "Most popular" emphasis.

Three vials

Show a discounted three-vial option with the savings visible. Mimic the reference's "Best value" emphasis.

Discount amounts

The reference shows 3.6% off for two units and 5.3% off for three or more. Confirm the final TrueMark percentages and whether the third tier applies to three vials or three-plus.

Second image: vial quantity and discount options

11 / MOTION AND REWARD THRESHOLDS

Cart, checkout & rewards

$75
FREE BAC WATER

$200
FREE SHIPPING

Revamp the cart box and popup

Use the same add-to-cart popup on desktop as on mobile. Revamp the cart box and clean up the popup animation on both mobile and desktop. Make it mimic the homepage slider.

Clearer, slower add-to-cart animations

Fix the mobile cart animations and slow down the add-to-cart animations on both mobile and desktop. Make the movement, timing, and confirmation polished and consistent so customers can clearly see that the item was added. Preserve the clear confirmation currently more apparent on desktop.

Progress bar styling and animations

Improve the cart progress bar using the end-to-end lot explanation as the visual reference. Revamp its animations so progress moves smoothly toward free Bac Water at $75 and free shipping at $200.

Consistent reward thresholds

Apply $75 for free Bac Water and $200 for free shipping across the cart, homepage messaging, and checkout. Replace older $150 free-shipping wording.

Shipping insurance

Add shipping insurance to the cart, enabled by default with an option for the customer to turn it off.

Loyalty points

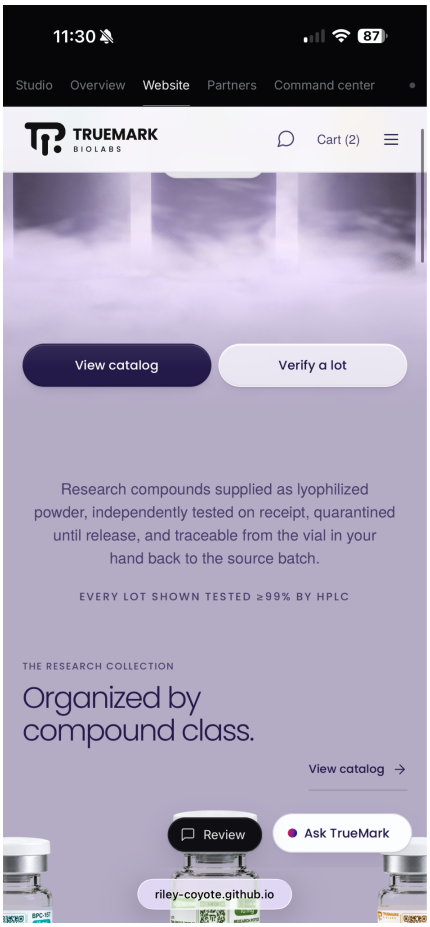

Integrate the loyalty points system and agree on the earning and redemption rules.

12 / VISUAL BUGS

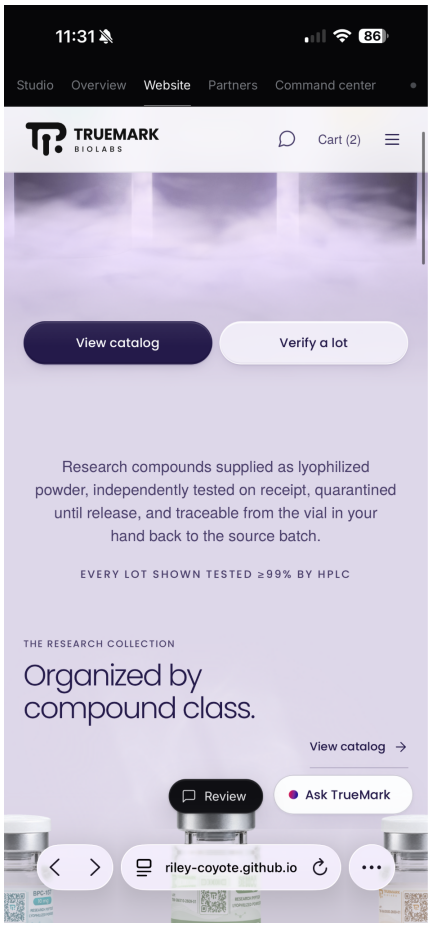

Background & scroll behavior

Refresh flicker and background jumps

Fix the background changing or jumping from dark to light on initial refresh and while scrolling.

Original background state

Original background after scrolling

Moving background light

Make the background hue and light effect move smoothly during scrolling, as it does on desktop. It currently jumps after scrolling stops.

Compound-class transition

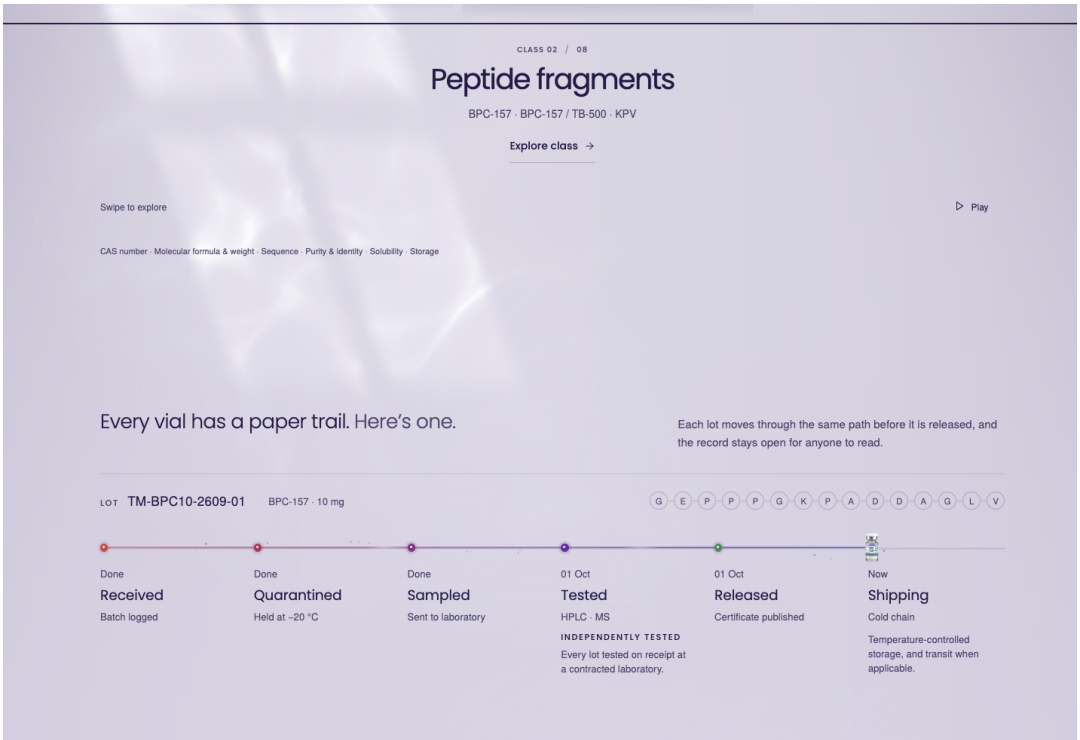

Check the transition into the compound-class section alongside the desktop animation fix in the homepage section.

13 / LAYOUT AND COMPATIBILITY

Spacing, navigation & Windows

Unexpected empty space

Fix empty-space glitches across pages, including the Coenzymes & cofactors section.

Original spacing gap above the lot traceability explanation

Returning to the homepage

The homepage loads correctly on the first visit. After opening another page, returning home through the navigation logo or the browser Back button produces a glitchy load. Reproduce and fix both return paths.

HP Envy on Windows

On my mom's HP Envy, the site shows the desktop layout and navigation, but behaves as though it loaded the mobile version: no animation on scroll, a carousel that is not continuous, and a glitchy background. Investigate why these mobile-style issues appear in the desktop view. Confirm the browser, affected pages, and steps to reproduce.

14 / COMPLETION REFERENCE

Review & handoff checks

Backend and future updates

Demonstrate the customer, login, order, tracking, and data-saving flows. Show how changes reach the front end. Provide the system map, software/account list, GitHub and Supabase update process, and the checks, backups, and rollback steps described on page 1.

Agents and connected tools

Demonstrate the customer and partner agents completing real tasks through the TrueMark brain. Explain learning and memory, data access, and the existing personal agent connection. Confirm analytics, email flows, the email agent, and the URL/payment-processing setup.

Operations

Walk through Packed, Dropping off, and carrier-confirmed Shipped states. Review the mobile shipping desk, Command Center changes, customer messaging, Research Blog editing, and profit-planner inputs.

Entry, products, and cart

Check the first-visit confirmations, disabled/enabled entry button, expanded disclaimer, exit, and working disclaimer/Terms links. Review the account and verification flows, vial tiers, purity results, and GLP-1 names. Confirm cart animations, shipping insurance, loyalty points, free Bac Water at $75, and free shipping at $200.

Visual issues and reference photos

Compare each fix with its attached reference. Check homepage placement and copy, collection behavior, promotion timing, About-page overlap, background motion, spacing, and both homepage return paths. Reproduce the HP Envy issue and review mobile and desktop behavior.

Remaining inputs

Settle partner-agent actions already discussed, learning/memory behavior, large-order review quantities, vial discount percentages and the three-plus rule, loyalty earning/redemption, profit calculations, GLP-1 replacement names, popup timing, the Verify animation reference, and entry-confirmation duration. Identify the browser and pages affected on the HP Envy.
